

Siberian Larch

BOTANICAL NAME

Larix sibirica

OVERVIEW

Introducing Siberian Larch – a premium wood known for its timeless beauty and durability.

Siberian Larch enhances exteriors, decks, and interiors with a warm golden hue that matures into a silver-grey patina.

Its exceptional strength, natural resistance to decay and insects, and adaptability to different climates make it a top-tier material.

Enjoy the enduring beauty of Siberian Larch with minimal maintenance sourced responsibly from sustainably managed forests.

“Graded to GOST

Main available grades US /SF and forths In Packaged to Length.

Further Product Information

APPLICATIONS & USES

Timber Cladding (interior and exterior), Ship Building Flooring, Decking

ENVIRONMENTAL CREDENTIALS

Certification

FSC

PEFC

Origin

Siberia

TECHNICAL INFORMATION**Density**

Average 675m³

Physical Structure

A hard tough timber, harder than Scots Pine, and slightly stronger in bending and toughness. Although quite a hard timber it is still very workable with tools, especially for mouldings. It can be glued, nailed, jointed with screws. Difficult to treat heartwood

Durability

Moderately durable – 10 -15 years ground contact, 80 -100 years outdoor exposure

Moisture Content

Average 18%
