

Fire Retardant Treatments & Coatings

OVERVIEW

Fire can devastate buildings and lives in a matter of minutes. Protecting against the threat and effects of fire is vital. International Timber can help you specify the correct and most reliable fire protection.

Industrially applied fire retardant treatments provide the peace of mind that in the unlikely event of a fire, the treated timber will be able to withstand fire for a longer period of time.

- Pressure impregnated with a leach resistant exterior grade fire retardant formulation
- Processed under ISO9001 factory-controlled conditions prior to supply
- Provides long lasting protection without further maintenance
- Meets requirements of Building Regulations where Euroclass B or C are required
- Will significantly reduce the spread of fire, heat and smoke generation
